Live production verification

Date: 20 October 2026 (Asia/Shanghai) **Production URL:** https://ctrlpay-new-bee4.vercel.app **Verified code commit:** `33fa188` (deployed through the GitHub Actions → Vercel workflow)

The production deployment is public and returns `200` without a Vercel login. The response headers include the hardened CSP (`wasm-unsafe-eval` and `worker-src 'self' blob:` for the self-hosted OCR worker) and `Permissions-Policy: camera=(self)` .

AI provider

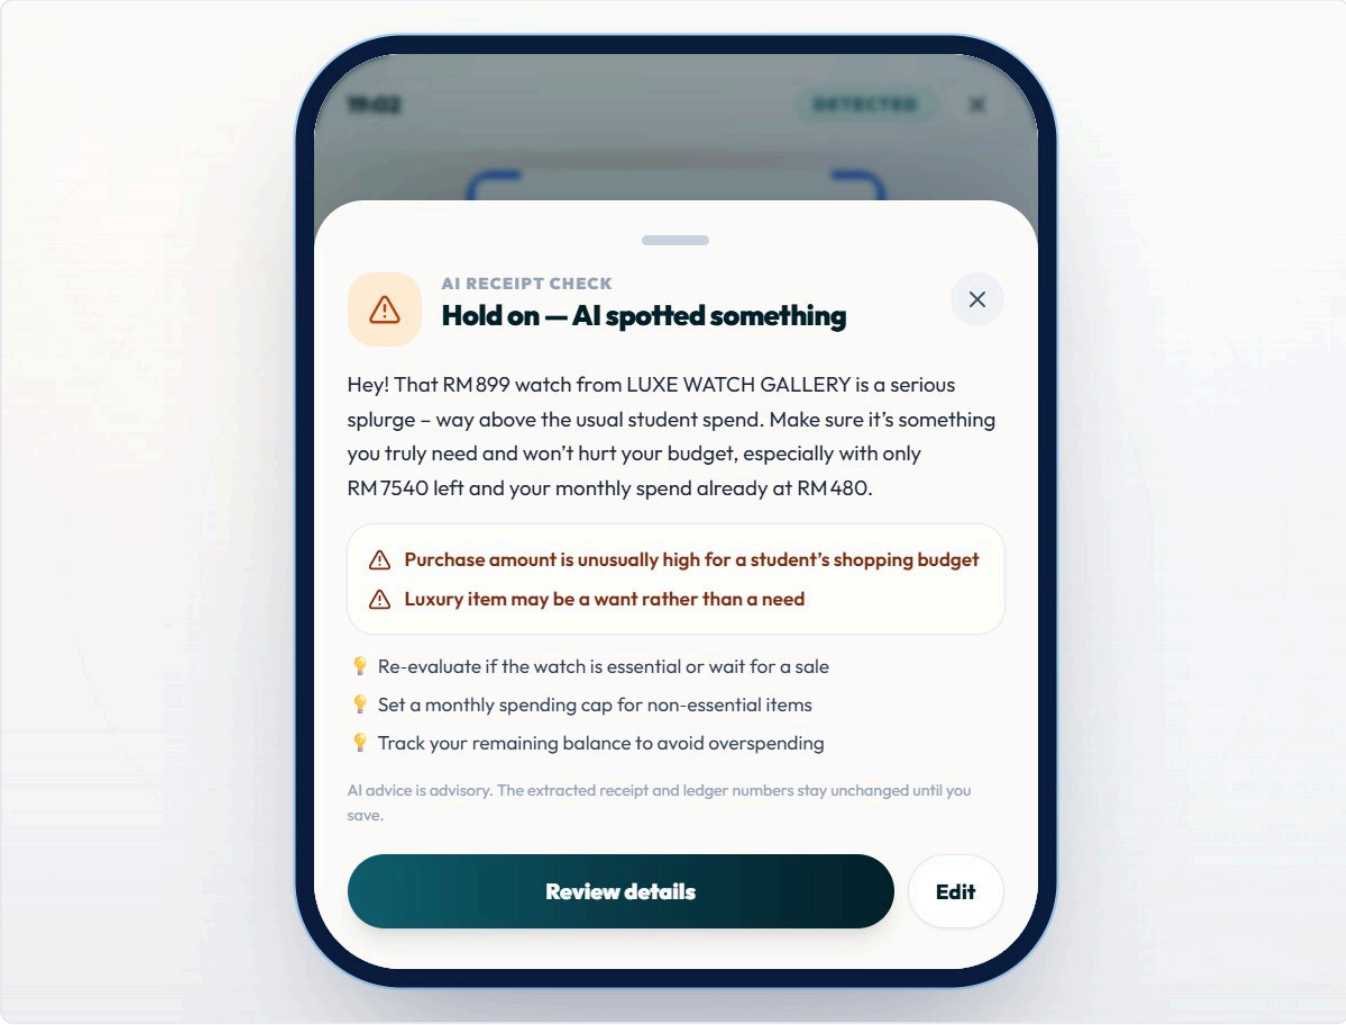

The Vercel project contains a Vercel AI Gateway credential (`AI_GATEWAY_API_KEY`) but no direct `GROQ_API_KEY` . The client therefore uses AI Gateway, pins routing to the **Groq** provider, and keeps the `openai/gpt-oss-120b` model. If a direct `GROQ_API_KEY` is added later, the client prefers it automatically; the gateway is only a fallback.

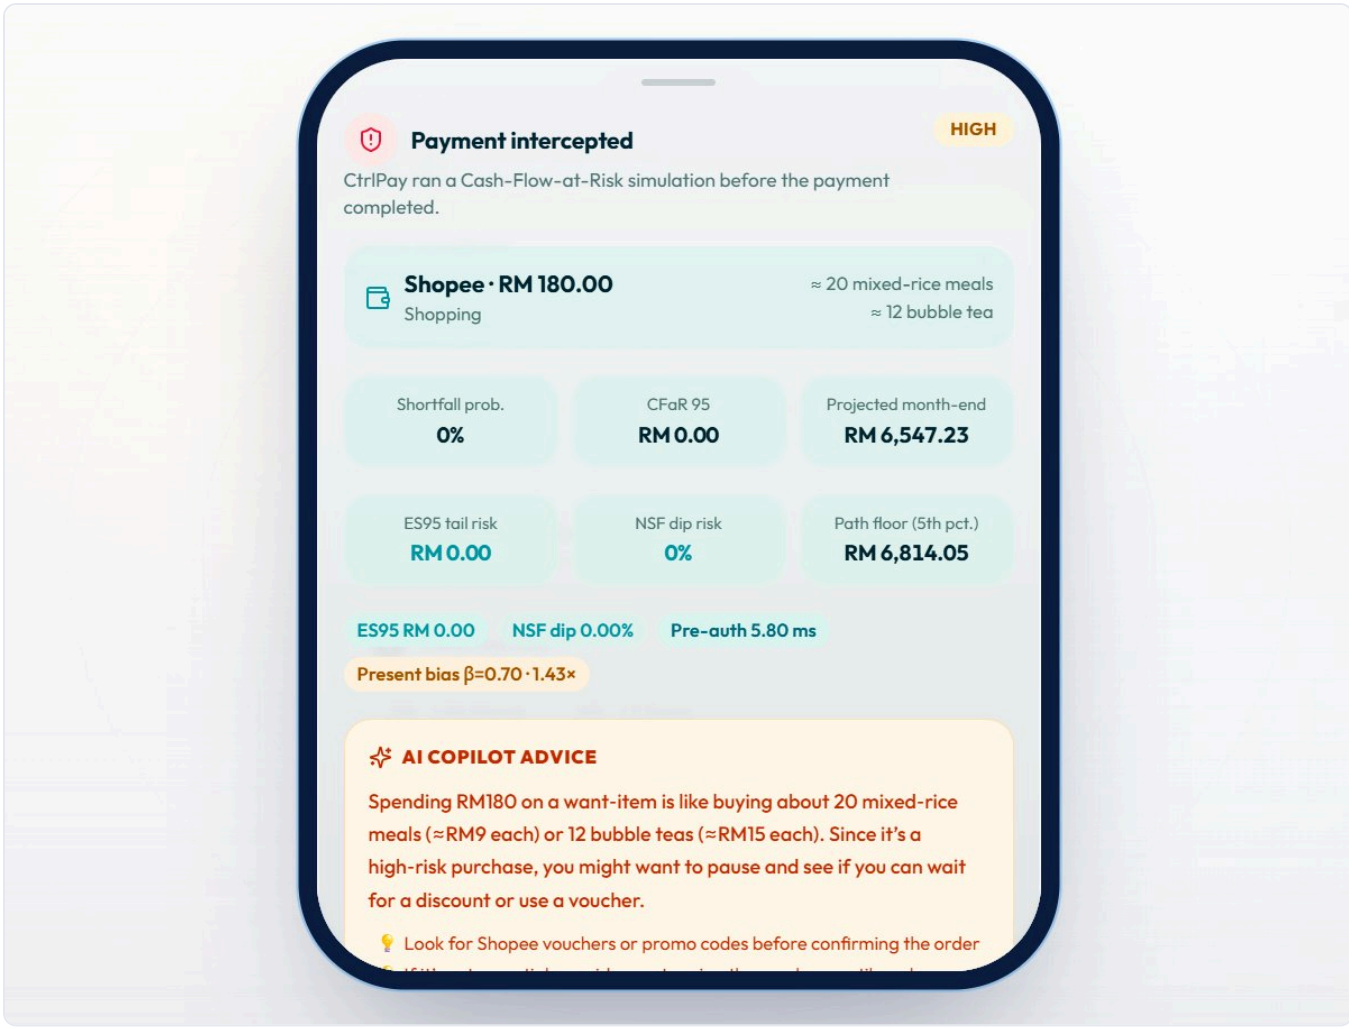

Verified live flows

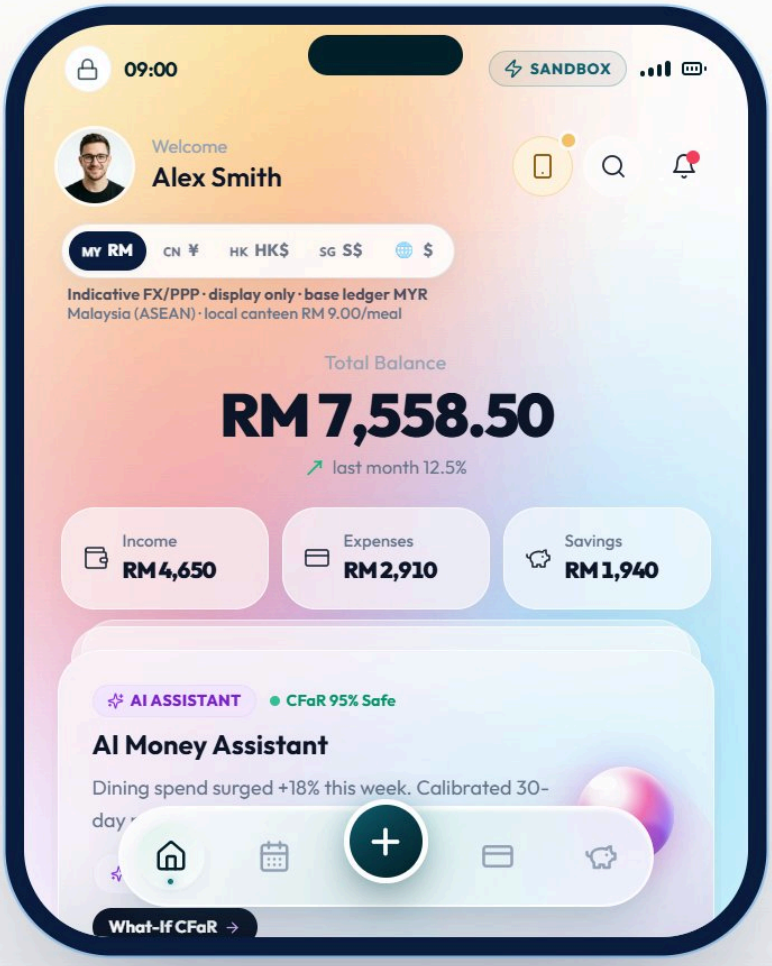

Flow	Result	Evidence
Free-form Copilot chat	Returned a live, streamed budgeting answer through the Groq-hosted model	—
OCR receipt → advisory warning	Tesseract extracted `LUXE WATCH GALLERY` / `RM 899.00` ; the live AI returned a warning and the modal opened with “Hold on — AI spotted something”	`production-ocr-ai-warning.jpeg`
Payment interception	A Shopee RM 180 impulse payment triggered the deterministic CFaR panel and a separate live AI Copilot advice card	`production-payment-ai-advice.jpeg`
Money typography / stage background	Main balance uses the same bold Outfit money face as the vault; outer stage uses the white Apple-style studio background	`production-dashboard.jpeg`
Quick Log readability	Amount and merchant fields render dark text on white inputs	`production-quick-log.jpeg`
Signed proposals	`CTRLPAY_SIGNING_SECRET` is present in the production runtime after the workflow provisioned it	Verified before the temporary diagnostic was removed; `/api/ai-status` now returns `404`

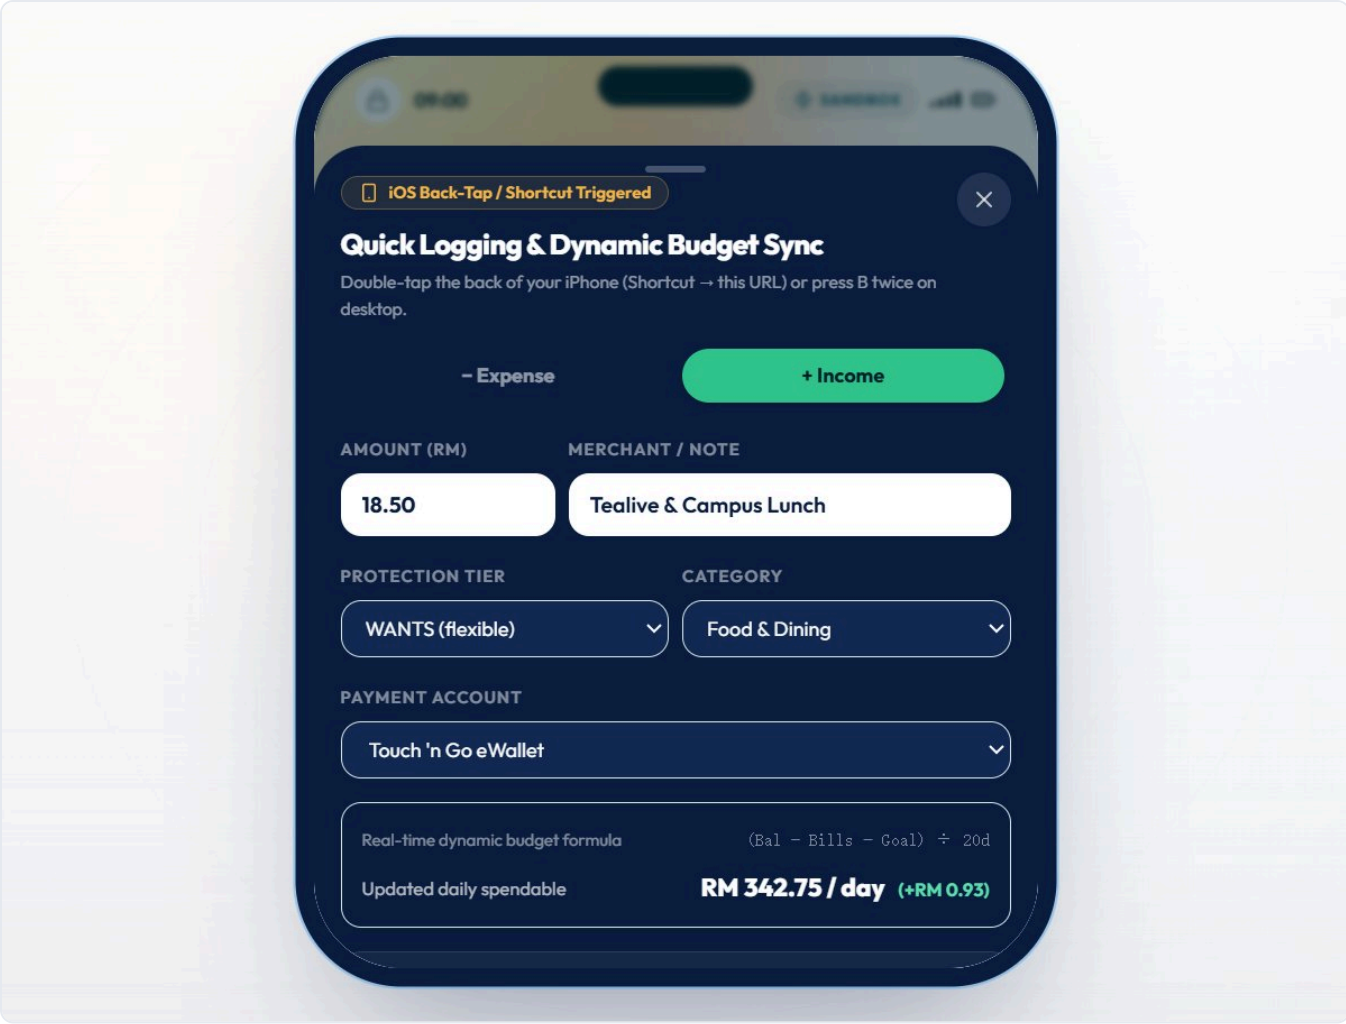

The receipt warning and payment advice were **live model calls**, not mocked responses. The AI remains advisory: the deterministic engine and signed proposal flow remain authoritative.

AI COPILOT ADVICE
Spending RM180 on a want-item is like buying about 20 mixed-rice meals (≈RM9 each) or 12 bubble teas (≈RM15 each). Since it's a high-risk purchase, you might want to pause and see if you can wait for a discount or use a voucher.
Look for Shopee vouchers or promo codes before confirming the order

Reproduce

```
# public page
curl -I https://ctrlpay-new-bee4.vercel.app

# live advisory route (replace with a receipt payload)
curl -X POST https://ctrlpay-new-bee4.vercel.app/api/ai-analyze \
  -H 'Content-Type: application/json' \
  --data-binary @receipt.json
```

The screenshots in this directory were captured from the deployed site at the verified code commit above.

Final validation

- `npm test` : **261 passed** (25 files)
- `npm run lint` : 0 errors (1 pre-existing `exhaustive-deps` warning)
- `npm run build` : production build succeeded
- Live `POST /api/ai-analyze` : OCR and payment advice both returned `200`
- Live `/api/ai-status` : `404` after removal
